Indus Net Technologies Successfully Revamps the MHRD Website

Kolkata, India, November 19, 2014 – Indus Net Technologies (www.indusnet.co.in) is renowned for enhancing business efficiency and solving business challenges using their innovative and unique technological expertise. With its 17+ years of experience in website development, the company specializes in customizing and revamping any website to make it more user-friendly and business-oriented. This expertise of Indus Net has helped them step into the e-Governance sector at ease with 100% delivery success rate. Considering prior experience of INT in developing websites and apps for the different Government of India Ministries, the Ministry of Human Resource Development (MHRD) chose Indus Net Technologies to revamp their existing website in association with the National Informatics Centre (NIC).

The Ministry of Human Resource Development, which was formed on September 26, 1985, warrants an all-round development of the citizens of India through education and plays a significant role in balancing the socio-economic fabric of the country. This extremely prestigious assignment even helped Indus Net Technologies get involved in a noble cause. Besides incorporating some of the key features including the screen reader access to help visually impaired people to access the site, Indus Net has given the website a Content Management Infrastructure that gives the Ministry a 3 levelled flexibility to alter the design and content of the website as and when required. INT has also focused on one of the important requirements of the Ministry; they have made the website bi-lingual, which means people from any parts of the country can access the website in English and Hindi languages.

With the responsibility of redesigning the website being assigned to INT, MHRD has shown its immense faith and confidence with the company; and Indus Net Technologies surely justified this faith of the Ministry by coming up with a unique and eye-catching design by using their updated web design techniques. This reflects that the organization and its professionals follow the best practices of the industry when it comes to designing or developing a website. In this context, to quote Mr. Abhishek Rungta, the CEO and founder of Indus Net Technologies, "I feel extremely proud that my organization has been assigned with such a crucial task. My employees tried their best to utilize their potentiality in executing the work in the best possible manner and we are happy that we delivered it successfully."

Indeed, this opportunity has not only boosted the confidence of INT's employees but also has encouraged other web design companies around the world to work hard in order to be trusted by others. This golden opportunity of redesigning such a legendary site has definitely given Indus Net Technologies a new identity in the e-Governance sector and the web development industry at large.

Summary: Indus Net Technologies, in association with the National Informatics Centre, has recently redesigned and redeveloped the entire website of the Ministry of Human Resource Development.

About the Author: Indus Net Technologies is a renowned IT service company and has excelled in cloud app development, website development, digital marketing and enterprise mobility for over 17 years.
